Coquille, OR 97423

RE: Supplemental Evidence in Support of Application Nos. HBCU-13-02

Dear Mr. Stamp:

This letter corroborates the testimony that I presented to you orally at the public hearing on September 20, 2013. Please make this letter part of the hearing record.

All Pacific Connector Gas Pipeline facilities proposed to be located within Coos County, Oregon are identical for gas flow in either direction. There have been no changes made. The facilities consist of a gas metering station at the west end of the pipeline within the South Dunes Power Plant site, approximately 45.7 miles of buried 36” outside diameter welded steel pipeline, and two buried inline block valves. As indicated at the hearing on September 20th, the pipeline would transport only natural gas, not LNG, and we would accept the Staff Report’s recommended modification to the prior condition of approval (Miscellaneous #25) restricting the conditional use permits to “the transportation of natural gas”.

No compressor stations are proposed in Coos County. One compressor station is required at the east end of the pipeline near the city of Klamath Falls in Klamath County.

Sincerely,

Williams Pacific Connector Pipeline, LP

Robert Peacock
PCGP Project Manager
