County commissioners, do not extend Pembina's permit. Wave energy and the jobs it will create in the infrastructure will far exceed Pembina. Not to mention sparing private property owners.

The twenty-first century is the time of creative and innovative energy production. Move Coos county out of the dark ages. Deny the Pembina extension. Welcome the new wave energy companies.

**This Message originated outside your organization.**

---

Deny the extension for expired pipeline permits. Section 5.2.600. Your duty is to county residents, not a foreign company.

Private property owners continue to have limitations on the use of their lands and the legal duty to disclose the existence of the permit. Coos County should support its citizens and their property rights over a foreign company.

The twenty-first century energy technology is in wave energy. Innovative and creative, it produces as much revenue and jobs as a pipeline, without seizing or limiting United States citizen's property.

Come into this century. Deny the extension for expired pipeline permits Section 5.2.600 Expiration and Extension of Conditional Uses.
